

Attributes Preset Values v1.5

OpenCart Extension

by **stv_vl**

e-mail: stefvlac@gmail.com

DESCRIPTION

This Extension helps the administrator to add attribute values quickly and accurately, for all the languages installed in the system. A list of preset values can be defined for each attribute. The preset values are then available in the “attributes” tab of product edit form. Using an **autocomplete** or **drop** list the user can select the values set to enter in an attribute. If necessary, **multiple presets** can be selected to create an attribute with combined values.

A new feature also allows you to **create presets from the existing attributes** already stored in your products.

In this version you can also create **attribute templates** to define sets of attributes that you can quickly add to products. You can also insert all the attributes of a specific group directly into a product.

Using preset values also guarantees that all products will have the exact same value in an attribute, making all filtering modules more accurate.

This extension uses **OCMod**, so no system files are affected.

FEATURES

- Define preset values for all languages in the **attribute** edit page
- Define **attribute templates** for quick attribute assignment in products
- Add to a product all the attributes of an attributes group.
- Automatically create presets from the existing product attributes
- Retrieve preset values in the product edit form for quick data insertion.
- Quickly enter both attribute and preset values by using the presets selection in a new attribute row.
- Multiple presets can be combined in a single attribute.
- Automatically update all related products when a preset value is updated.
- Extra button in the product’s attribute tab to copy the value of one language to all language fields
- Quick preset value insertion through the product’s attribute tab.

INSTALLATION

- Unzip the downloaded file in a folder of your choice. One of the file is called “**install.ocmod.zip**”
- Go to “**Extensions->Extension Installer**” and upload the “**install.ocmod.zip**” file.
- After the procedure is completed, go to “**Extensions->Modules**” and install the module “**Attributes Preset Values**”.
- Go to “**Extensions->Modifications**” and click the **blue refresh** icon on the upper right.
- Done

UPGRDADE to 1.5 from older versions

- Remove the old modification entry from the “**Extensions->Modifications**” page
- Go to “**Extensions->Extension Installer**” and upload the “**install.ocmod.zip**” file.
- Refresh modifications from the “**Extensions->Modifications**” page.

- Go to “**Extensions->Modules**”, edit the “Attribute Presets” module and click the “**UPGRADE**” button (not necessary when upgrading from 1.4).

SETTINGS

Go to “**Extensions->Modules**” and edit the “**Attributes Preset Values**” module.

- **Clear database on uninstall:** when yes all changes and new data are removed from the database if the module gets uninstalled.
- **Auto update products:** When a preset value is selected for an attribute, the product gets linked to that preset value. When this option is set to “yes”, a change of a preset value will cause all linked product to be updated.

NOTICE: if “No” is selected, a preset value change will unlinked all related products.

- **Allow multiple preset selection in products:** By enabling this option you have an extra option when you edit a product. You can choose to select many presets for an attribute and create a complex value, combining simple presets separated with comma.

NOTICE: if “YES” is selected, you will be forced to use drop list in the edit product page and not autocomplete.

- **Presets selection type:** Select how you want to select the presets in the attributes tab of the product edit page. You can use a drop down list or an autocomplete field. Autocomplete forces “Multiple Preset selection” to disabled.
- **Select character to separate Multiple values in front end.** In case you use multiple value selection, you can define how those values will appear in the front end. You can show each value in a different line or define a character as separator.
- **Autocomplete list size:** Number of items in the autocomplete list of the preset values, inside the product attributes tab.
- **Create presets from existing attribute values.** Use this button to create presets from the attributes currently stored in your products. Those presets are automatically linked to the corresponding products.

USAGE

Attribute edit page

- Inside the attribute edit page, there is a new section on bottom for adding preset values.
- If you have only one language installed, all preset values will be immediately visible.

Sort Order: 3

* Preset Values

		1500
		1800
		1900

- If you have more than one language in your system, each preset will be inside a collapsible frame.

Sort Order: 3

* Preset Values

1200 MHz		
		1200 MHz
		1200 MHz
1400 MHz		
1500 MHz		

- If you have more than one language in your system you will see a button next to the flag icon, like the one in the image below. This button is used to copy the value set for a language, to all the language fields.

* Preset Values

2000		
3000		
		3000
		3000

[Add Preset Value](#)

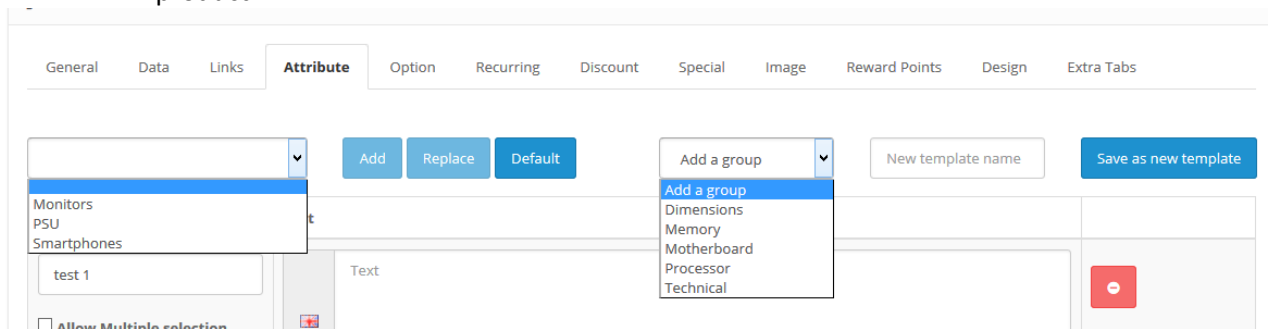

- Any changes made in the preset values are saved when the attribute is saved.

Attributes Template page (Catalog->Attributes->Attribute Templates)

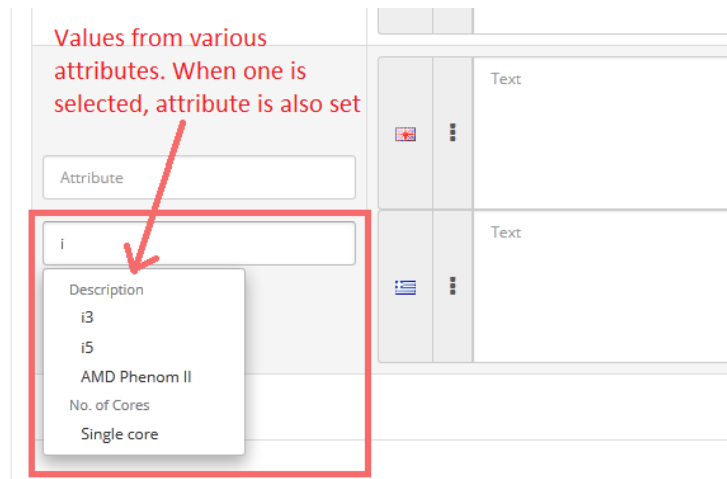

- In the first page you can see all your attribute templates. You can **add, edit** or **deleted templates**.
- If you edit a template you can define the **name** and change the **status** of the template. A disabled status is not available in the product edit page.
- You can add attributes in your template in the same way you add attributes to a product. For each attribute you can select a preset value which will be used when you add the template in a product.

Product edit page (attributes tab)

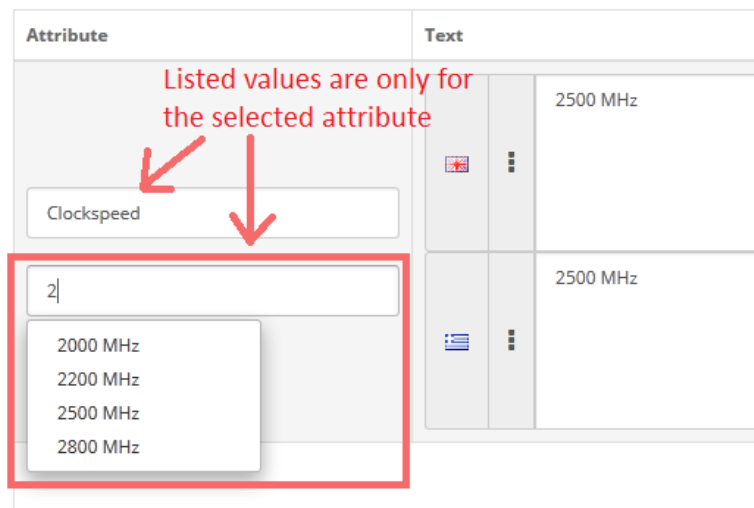

- In the product edit page, in the **attributes tab** you have some new options on top related to the attribute templates. You can select a template from the list and choose to add it in the current attributes list of the product. There are three buttons
 - **ADD** - Insert in the list all attributes from the template that are not currently present
 - **REPLACE** - Remove all attributes from the list and insert the template's attributes
 - **DEFAULT** - Remove all attributes and get back the attributes currently saved in the product

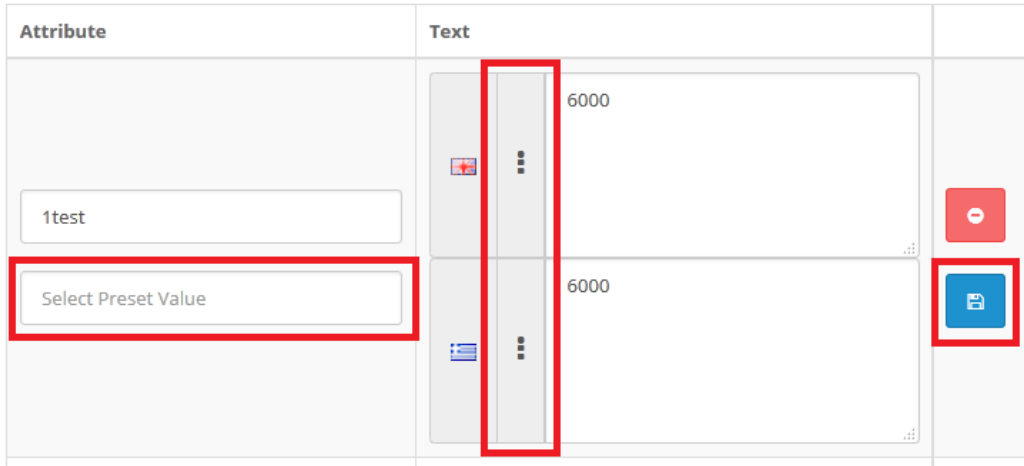

- The selection list in the middle contains all the attribute groups of your system. When a group is selected, all the related attributes get added in the product attributes list.
- You can quickly save the current attributes list as a template by setting a name and click on the **“Save as new template”** button on the right.
- New input field has been added below the attribute selection field. The new input is an autocomplete field that shows results depending on the attribute selected.
 - **If NO attribute has been selected** the autocomplete shows preset values of different attributes. When one is selected, both attribute and values are set automatically

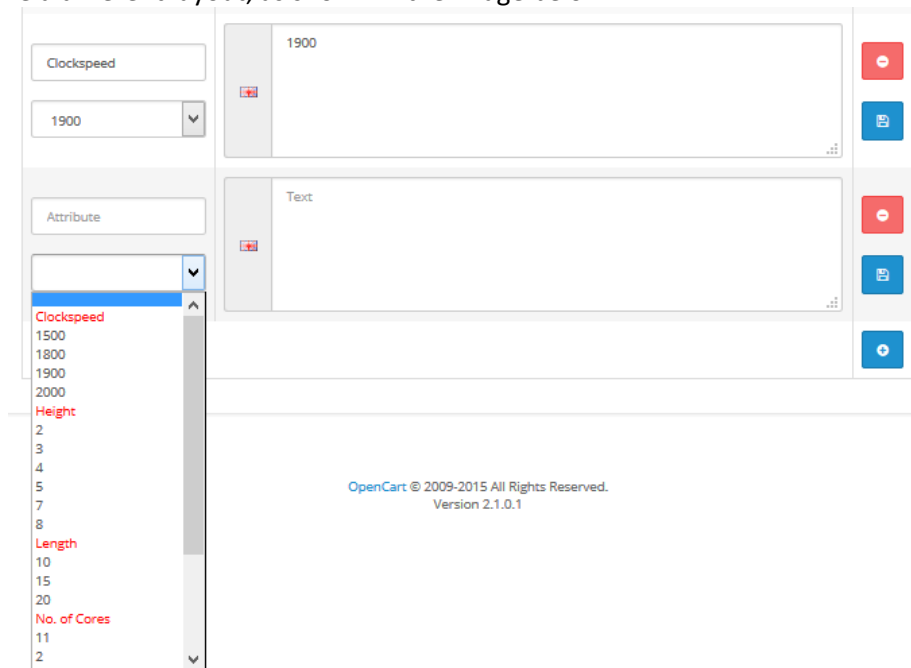

- **If an attribute has been selected** the autocomplete shows preset values only of for the selected attribute

- When a preset value is selected from the autocomplete list, all language fields are automatically filled.
- The icon of the previous page is also available in this page, in case you want to copy the value of one field to all other language fields.
- At the right, below the “remove” button, a new button has been added. This button can be used to store a set of values to the presets.

- In case you have selected the **drop down** list instead of the **autocomplete field**, the attributes tab will have a different layout, as shown in the image below.

- In case you have enabled “Multiple presets selection”, you will be able to combine presets in order to create an attribute value, as shown in the image below.

Attribute	Text				
<input type="text" value="Weight"/> <input type="checkbox"/> Allow Multiple selection <input type="text" value="146.40 g"/>	<div>146.40 g</div> <div>146.40 g</div>	<input type="button" value="−"/> <input type="button" value="📄"/> <input text"="" type="button" value="Color"/> <input checked="" type="checkbox"/> Allow Multiple selection <div>Black Blue Green Red White Yellow</div>	<div>Black, Red, White</div> <div>Black, Red, White</div>	<input type="button" value="−"/> <input type="button" value="📄"/> <input 2"="" style="text-align: center;" type="button" value="+</input></td></tr><tr><td colspan="/> Multiple Presets selected
